What's New in KeepnTrack 3.16.3?

Happy new year! Look forward to several useful improvements in KeepnTrack.

URL Shortcuts

You can now access any module in KeepnTrack using a simple URL: your site URL slash / the module name, e.g yourschool.keepntrack.com/reports. That saves a few steps.

Activity Counts

While we're here, there is a new report that lets you get a list for a given date range for activity count—that means you could see attendance for various clubs or activities, and see which clubs have the most activity counts and which ones have the least.

Network Printer

KeepnTrack has a new printer. The Network Printer doesn't need to be plugged in to your computer, so it can be used by multiple kiosks at the same time.

The Workstation settings can be much more customized, allowing for multiple Network printers. So for example, you could have 5 kiosks all using the same 3 Network printers, where 1 printer is for visitors who get a red badge, 1 printer is for volunteers who get a blue badge, and 1 printer has slip paper for student tardies. ...Or you can keep things simple. Your choice.

Contact sales@keepntrack.com or 1.800.347.6439 to learn more about getting this cool printer.

Misc

A few more things…

You can now hide the Alert button in attended kiosks; this is done in Workstation Management.

Also… you can name your Workstations.

When someone is signed out by the system—meaning they probably forgot to sign out—in History Management, their history record shows their sign in and sign out date and time as the same. Now, the Change Log in History Management also notes that this person was signed out by the system.

See the complete Release Notes for more, or Contact Support for questions or feedback!
